

Abstract of the Disclosure

5 Methods, apparatuses and systems facilitating the configuration of parameters controlling utilization of a network resource. In one embodiment, the present invention allows a network administrator to quickly and easily configure effective bandwidth utilization controls and observe the results of applying them. According to one embodiment, a network administrator is presented with an interface displaying
10 the most significant traffic types with respect to a bandwidth utilization or other network statistic and allowing for the association of bandwidth utilization controls to these traffic types.
